

Employer Side — Product Plan

What We Are

A talent discovery platform. Employers find verified candidates and make first contact. That's it.

Think: Indeed, but with verified candidate data and flat pricing instead of pay-per-click gambling.

What We Are NOT

- Not an ATS (applicant tracking system)
- Not an HRIS (onboarding, payroll, benefits)
- Not a background check company (MVR ordering is the one exception — it's niche and valuable)
- Not a compliance/reporting platform

Once an employer decides to hire someone, that moves to their own systems. We own top-of-funnel.

The Employer Flow

Connect wallet → Select "Employer" → Company setup
→ Land on hub → Post jobs, search talent
→ Find someone → View their career card (verified blocks)
→ Interested? → Save them (moves to "My Candidates" pool)
→ Ready? → Message them, order MVR if needed
→ Hire them in their own system

Core Features (KEEP)

Feature	Status	Notes
Company onboarding/profile	Built	Entry point. Clean, stays as-is.
Job posting (CRUD)	Built	Post, edit, activate/deactivate. Keep simple.
Talent search	Built	THE money feature. Filter by verified blocks, location, skills.
Career card viewing	Built	Verified, block-driven candidate profiles. Our differentiator.
Candidate pool (pipeline)	Built (over-scoped)	Simplify. See below.
Candidate notes	Built	Private employer notes. Useful, lightweight.
Messaging	Built	Direct candidate communication.
MVR ordering	Built	Pay-per-order via USDC. Real revenue.
Team management	Built	Owner + members. Keep basic.
AvA (employer)	Not built	AI assistant with context about their open roles and candidate pool.

Simplify: Candidate Pipeline

Current state: 6-column kanban (New → Reviewing → Interviewing → Offer Sent → Hired → Rejected). This implies we're replacing their ATS. We're not.

Target state: 3 statuses only.

Status	Meaning
New	Just applied or was saved from talent search
Contacted	Employer has reached out
Archived	Not interested / already hired / passed

Keep the kanban UI (it looks good), just with 3 columns instead of 6. Drop "Reviewing", "Interviewing", "Offer Sent", and "Hired" — those are ATS territory.

Remove: Find Drivers Page

`FindDriversPage.tsx` is a driver-specific duplicate of Talent Search. This app isn't just for drivers. One search page with career-category filters handles everything.

Action: Remove `find-drivers` from `EmployerShell`. Talent Search becomes the single discovery page with block-type filters (CDL, GitHub, Portfolio, etc.) that adapt to whatever career categories exist.

Remove: Reports / Analytics Page

Over-scoped for V1. Employers don't need compliance reports or hiring analytics from us. If we add analytics later, it should be simple: views per job, contacts made, that's it.

Action: Remove `reports` route from `EmployerShell`. Can revisit post-launch.

Remove: Dead Code

File/Route	Why
<code>ApplicationInvites.tsx</code>	Not imported anywhere. Dead.
<code>/api/employer/hub/driver-data</code>	No client calls it. Dead.
<code>/api/employer/applications/[id]/export</code>	No UI links to it. DOT export is candidate-side concern.
<code>/api/employer/reports</code>	Removing reports page.
<code>EmployerVerificationSection</code>	Scope creep — we're not a verification company.

Revenue Model

Why We Win Against Indeed

Pain Point (Indeed)	StormChain Answer
\$25/day minimum per job, costs rising 300-400%	Flat monthly pricing
Spam applications, 1000+ unqualified candidates	Verified block-based profiles — candidates invest in building quality profiles
Pay-per-click bidding war	Transparent subscription
Self-reported resumes, no verification	Career cards with verifiable CDL, MVR, GitHub, education, employment
Locked into Indeed's ecosystem	Web3-native, wallet-based, portable identity

Pricing Tiers

Tier	Price	Includes
Free	\$0	1 active job, browse talent (blurred details), 5 messages/month
Pro	~\$49/mo USDC	Unlimited jobs, full talent search, unlimited messaging, AvA, team seats
Enterprise	Custom	API access, bulk MVR, priority support

Per-Transaction Revenue

Action	Cost
MVR order	Per-order USDC (already built)
Sponsored/featured job	Future upsell — pay to boost visibility to candidates

Build Order (Implementation Priority)

Phase 1: Simplify & Ship (do this first)

1. **Simplify pipeline to 3 columns** (New, Contacted, Archived)
2. **Remove Find Drivers page** — merge into Talent Search with career-category filters
3. **Remove Reports page** — cut dead weight
4. **Clean up dead code** (ApplicationInvites, unused API routes)
5. **Polish Talent Search** — make sure block-type filters work for all career categories, not just drivers
6. **Polish Job Posting** — smooth flow, clear UX

Phase 2: Monetization Gate

7. **Subscription system** — Free tier limits (1 job, 5 messages) + Pro unlock via USDC
8. **AvA for employers** — context-aware assistant that knows their open roles and can help write job descriptions, suggest search filters, understand candidate blocks

Phase 3: Post-Launch Upsells

9. Sponsored job posts (pay for visibility boost)
10. "Suggested for you" candidate matching (AvA recommends candidates based on job requirements vs blocks)
11. Basic analytics (views per job, contacts made)
