

Ava Brain - Quick Reference Diagram

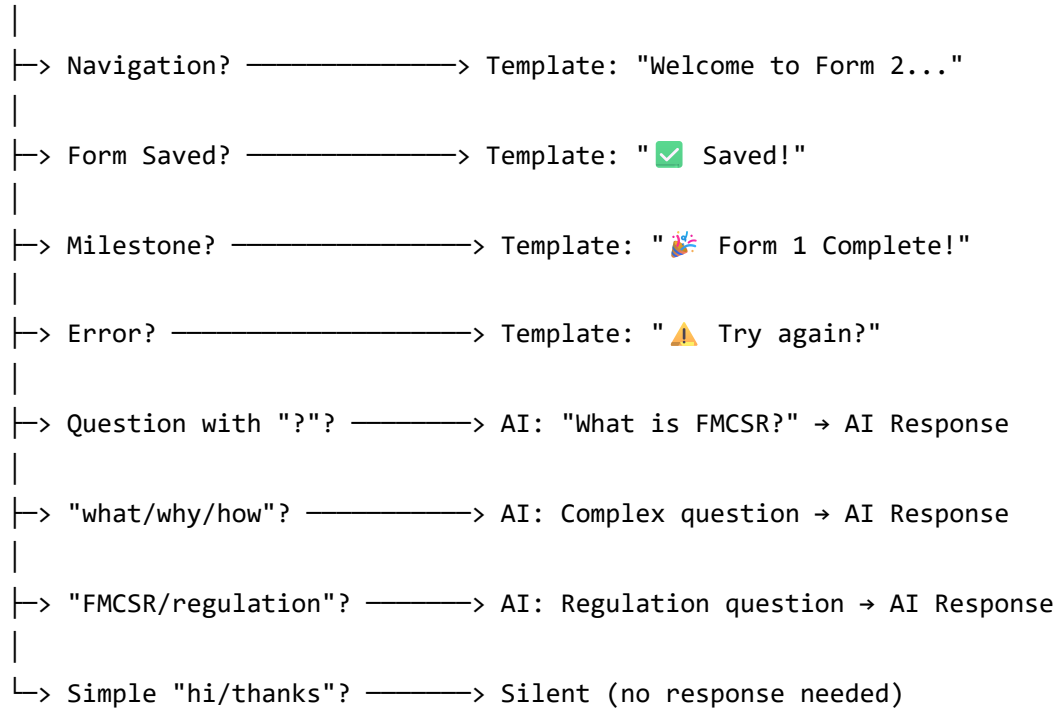

The Big Picture

(Same experience)

Decision Tree

User Action

Cost Comparison

BEFORE: Always AI

Every action → AI API → Response

- 100% AI calls
- 1-3 second delay
- \$\$\$\$ Expensive

AFTER: Smart Routing

Action → Check Template → AI Only If Needed

- 80% Templates (free, instant)
- 20% AI (when needed)
- 80% cost savings
- Instant UX for most cases

What Gets Templates vs AI

TEMPLATES (80%) - Instant, Free

- └─ Navigation hints
- └─ Form confirmations
- └─ Milestone celebrations
- └─ Error messages
- └─ Inactivity prompts
- └─ Simple acknowledgments

AI (20%) - Smart, Contextual

- └─ Questions with "?"
- └─ "what/why/how" questions
- └─ DOT/FMCSA regulations
- └─ Career advice
- └─ Complex explanations

Real Example

User: "hi"

- Brain checks → No template, no AI pattern
- Silent (no response)

User: Navigates to Form 2

- Brain checks → Template match: "nav:form2"
- Instant: "Welcome to Form 2: Driving Experience..."

User: "what is FMCSR?"

- Brain checks → AI pattern match (regulation keyword)
- AI call: "FMCSR stands for Federal Motor Carrier..."

User: Completes Form 1

- Brain checks → Milestone: "form1_complete"
- Instant: "🎉 Form 1 Complete! You're 1/3 of the way..."

User: Idle 30s on Form 2

- Brain checks → Inactivity detected
- Instant: "Need help with this field?"

The Magic

User Experience: Ava feels "omniscient" ✨
Always aware, always helpful

Reality: Smart routing system 🗨️
80% templates, 20% AI

Result: Best of both worlds 🎯
Great UX + Low Cost
