

PROVVEN

Who Sees What — and How a Shared Card Becomes a New Employer

Three kinds of people touch Provven: candidates (drivers), employers, and the person in between — a **potential employer** who receives a shared career-card link but doesn't have an account yet. This plan turns that shared card into our best sales tool, without building a third product.

Access Model & Interested-Party Funnel · September 23, 2026 · Internal planning document

The Three Audiences

Candidate (driver) NO CHANGE	Potential employer (link viewer) UPGRADED	Employer SMALL CHANGE
Logs in and sees only their own stuff : their blocks (DOT app, CDL, MVR, resume...), their career card, their share link. Owns their data. Decides what the share link shows.	A recruiter or safety manager clicks a shared card link. No account, no login . Sees one verified candidate — and soon, proof there's a whole pool of them plus a 30-second path to employer access. The shared card is our sales pitch. Every card a driver shares is a demo of the product.	Logs in and sees the whole talent pool : search, career cards, verified facts, screening orders, outreach. Gains one new state: "pending approval" for brand-new companies.

The big decision — no third portal. The "show me more candidates like this one" experience already exists: it's the employer portal, and it's what employers pay for. We don't rebuild it for strangers. The shared card **teases** the pool with counts and gives an instant on-ramp into the portal we already have. Principle: **gate the data, not the door** — let potential employers in instantly; admin approval controls what they can see, not whether they can enter.

Every Way a Person Lands on Provven

Every door into the site, who walks through it, and whether this plan touches it. Only two rows change.

Entry point	Who arrives	Login?	What they see	This plan
proven.com (home)	Anyone	No	Marketing page → sign in or browse jobs	Unchanged
Sign-in page	Candidates & employers	—	Email / Google / magic-link login	Unchanged
Candidate hub (after login)	Candidate	Yes	Their own blocks, files, career card, Stormi	Unchanged
Shared career card — /card/...	Potential employer	No	One candidate's card: verified facts, DOT status, CDL	Upgraded — sales surface
Employer portal (after login)	Employer team	Yes	Talent search, cards, screenings, outreach	+ Pending state
Job invite — /apply/...	Candidate invited by employer	No (login to accept)	Invite landing → join → guided block setup	Unchanged
Invite setup — /onboard/...	Invited candidate	Yes	Installs the requested block	Unchanged
Team invite — /invite/...	New employer team member	Yes	Joins an existing company account	Unchanged
Employment check — /verify/...	Candidate's former employer	No (link is the key)	One-time employment verification questionnaire	Unchanged
Shared application — /application/...	Anyone with the link	No	Snapshot of one job application	Unchanged
Old share links — /d/... , /dev-card/...	Holders of old links	No	Legacy profile pages	Retire → /card

What Stays, What Changes, What's New

Keep as-is	Change	Add new
● Candidate hub + all blocks (DOT app, CDL, MVR, PSP, EV, resume...) ● Employer portal: talent search, verified facts, screening orders ● MVR & PSP never shown on public links — stays locked ● Admin has final say on every new employer (approve / suspend) ● Connect form for viewers to message the candidate	● Privacy fix: hide the CDL <i>number</i> on shared cards (keep class, state, endorsements) ● Pool teaser on shared cards: "One of 47 verified CDL-A drivers within 50 miles — 31 clean MVRs." Counts only, never other drivers' profiles ● Pending mode in employer portal: a new company sees the one card they came from + pool stats; full search unlocks on approval	● "Get employer access" button on every shared card — name, company, work email. 30 seconds ● Instant pending accounts. Work-email domains get in immediately; free emails (gmail, yahoo) are flagged for manual review ● Admin queue entries. Approve → full portal. Reject → suspend. Same controls as today, fed by high-intent leads

The Conversion Journey — From Link to Paying Employer

1	Clicks the shared card link Sees one verified candidate — facts strip, DOT status, CDL class. No login wall. The hook: "this data is real and verified."
2	Sees the pool teaser "One of 47 verified CDL-A drivers near Columbus — 31 clean MVRs." Numbers only, no profiles. The pitch: "there are more where this came from."
3	Taps "Get employer access" Name, company, work email. Work domain → instant pending account; free email → manual review first. The close — at peak interest, not a "we'll email you" form.
4	Lands in the employer portal immediately (pending mode) Full view of the candidate they came for, plus pool stats. No waiting room, no cold lead.
5	Admin approves Full talent search unlocks. Admin keeps the same approve / suspend authority as today.

1 card

Max data visible before approval

0

Candidate profiles browsable anonymously

~30 sec

From link to pending account

Why the signup gate can loosen here. The old problem was drivers picking "employer" on a generic signup screen — ambiguous intent at a shared front door. This funnel is the opposite: the person arrived from a candidate's card, clicked an employer-only button, and entered a company name and work email. Intent is unambiguous — and admin still gates the pool.

Deliberately NOT Building

A third portal or account type

Two products, three audiences.

Anonymous candidate browsing

The pool is the paid product.

Blurred candidate previews

Counts sell the pool without exposing anyone.

MVR / PSP on public links

Compliance posture unchanged.

Build Order

#	Piece	Why this order	Size
1	Hide CDL number on shared cards	Privacy fix — do it regardless of the rest	Small
2	Pool teaser + access button on shared cards	Starts converting viewers immediately	Medium
3	Instant pending accounts + admin queue	Completes the funnel; reuses existing approval machinery	Medium
4	Retire old /d and /dev-card share pages	Cleanup — one public card experience	Small
